

Medical University

123 University Boulevard
Online/ Classroom Program

Dear Student Candidate,

Due to a generous non-profit organization, you are being granted free admission in the University of Medical Learning Program. This prestigious program will allow you to work with a specialist in your program area of study and prepare you for a short medical residency which involves a possible dissection of a mammal organ. Admission to this program will not be easy and will require additional study outside of school hours. We know you can do it and look forward to the results.

Please carefully consider which medical program area you will be studying under. Do not underestimate the level of importance in this decision. For example, do you think you can handle dissecting a cow eye and really undertake the session as a valuable learning event? If not, you are free to choose the non-dissecting route listed below:

1. Ophthalmologist (Muscular System)- Requires cow eye dissection before graduation
2. Cardiologist (Circulatory System)- Requires pig heart dissection before graduation
3. Orthopedic Specialist (Skeletal System)- Requires owl pellet sorting before graduation
4. Pulmonary Specialist (Respiratory System)- Requires pig lung dissection before graduation
5. Neurologist (Nervous System)- Requires sheep brain dissection before graduation

Your prompt decision will be required for entrance to the program. Please discuss this with your family, as they may be able to support you under one program better than another (ex- family friend, personal experience, access to resources, etc.).

I have talked with my family, and we decided the best program for me will be:
